Started: 5 May 2026

REACTION

angioedema

Onset: 21 May 2026 Outcome: recovered

Serious: YES - LIFE_THREATENING

NARRATIVE

A 45-year-old male with lifelong asthma used Pralextin two puffs as required from 5 May 2026. He was additionally given Astelvia 1 g three times daily on 18 May for post-operative prophylaxis. On 21 May he developed swelling of the lips and tongue with difficulty swallowing, and on the following day persistent dizziness. He attended the emergency department and was treated with intramuscular adrenaline. Both medicines were stopped.

REPORTED BY

Marcus Delane (Community Pharmacist)
