Weight: —

History: atrial fibrillation, mild renal impairment

SUSPECT DRUG

REACTION

syncope

Onset: on Tuesday Outcome: recovered

Serious: YES - HOSPITALISATION_OR_PROLONGATION

NARRATIVE

An elderly gentleman on our ward had a sudden loss of consciousness while standing on Tuesday and fell. He is on several regular medicines but the drug chart was not available to me when I wrote this and I do not want to guess which one is relevant. He was admitted overnight for observation and has recovered.

REPORTED BY

Sister Priya Raghunathan (Senior Staff Nurse)

St Elwyn's General Hospital

United Kingdom
